

29 SPACE-RAY heaters hang symmetrically in this high ceiling steel building . . . typical of SPACE-RAY installations now being made all over the country.

FROM L. J. HERRING IMPLEMENT CO., THE OWNER WRITES:

After comparing Space-Ray with conventional warm air heating methods—"we became convinced that your heater was the best for us."

In this steel constructed building, massive overhead doors swing open frequently for passage of trucks, tractors, and large farm equipment . . . yet men, concrete floors, and equipment will remain comfortably warm; literally blanketed in indoor summer sunshine.

L. J. HERRING IMPLEMENT COMPANY, Wilson, N. C.
