**High Efficiency Radiant Gas Brooders**

**Space-Ray®**, A Division of Gas Fired Products, Inc. Since 1949

- **SRB40 CR**

**Our Angle Is On Performance & Quality**

- 40,000 BTU/HR Model SRB40 Provides Fuel Efficient, Radiant Gas Heat For A Variety Of Poultry Applications.
- 3-Year Limited Warranty On Complete Emitter Assembly
- 4 Control Options To Fit Your Individual Need
- Factory Pre-Assembled Components For Quick Installation

**The Original Radiant Gas Brooder**

Space-Ray designed the original radiant gas brooder for use in Europe 50 years ago. Our emphasis was then, as it is today, on quality and fuel efficient performance. Performance you can rely on. When it comes to product reliability and fuel efficient operation, Space-Ray Radiant Gas Brooders have withstood the test of time.

**Unique 60° Emitter Angle Puts More Radiant Heat Into Primary Brood Area**

No other radiant gas brooder can provide more radiant heat to the floor of your poultry house than Space-Ray. Our specially designed 60° emitter angle, combined with our deep dish aluminum canopy, produces an optimum heat pattern in the primary brood area. This large radiant heat pattern means that fewer brooders are required in each house resulting in fuel savings.

**Powerful And Fuel Efficient Radiant Heat**

Space-Ray Radiant Gas Brooders operate using the same principle as the sun. Before heating the air, radiant warmth is delivered directly to the birds and litter area where it's needed most. This radiant warmth helps to dry out the litter area and keep ammonia levels lower. It also creates a thermal reservoir which stores the heat and maintains a warmer litter area. This radiant heat transfer method results in fuel savings which will continue year after year.

**Fully Insulated, Enclosed Emitter Assembly For Durability & Efficiency**

Space-Ray’s stainless steel emitter assembly is fully insulated and enclosed so the insulation will not crumble or distort in the tough operating conditions normally found in poultry houses. This exclusive design not only provides durability but also prevents heat loss back through the emitter that can occur over time. This results in higher radiant output and continued energy efficiency that translates into annual fuel savings.
SRB40CR Saves Fuel And Reduces Maintenance

**DUAL FUEL GAS VALVE**
Direct spark ignition models come standard with a dual fuel regulator (blue cap) to easily convert between gas types by just flipping the regulator and changing the orifice.

**DSI Model Can Save Up To 5.8 Gallons Of Propane Per Day**
The Space-Ray DSI brooder saves fuel that would normally be used for the pilot. Fuel that is currently used 24 hours a day, even when there is no call for heat. In fact, a broiler house with 14 brooders can use over 5.8 gallons of fuel each 24 hour period for just the pilot.

**Patented WindBuster® Pilot**
The WindBuster Pilot System not only enhances flame stability but provides dependable ignition for virtual trouble-free operation, even with wind speeds up to 7 mph (11.2 km).

**FOR YOUR SAFETY**
OPERATE SPACE-RAY HEATERS WITH PROPER CARE AND OBSERVE ALL SAFETY PRECAUTIONS. Installation and service must be performed by a licensed contractor. The installation must conform to local codes. Please thoroughly read and follow the installation and operating instructions provided with each heater. In the absence of local codes, the installation must conform with the National Fuel Gas Code ANSI 2223.1 (latest edition also known as NFPA 54) or CGA B 149 installation codes (latest edition). These codes are available from the National Fire Protection Asxn, Inc., Batterymarch Park, Quincy, MA02269 (www.nfpa.org) or contact CSA at 1-800-463-6727.
